Push To Everything – the Next Generation of Push To Talk

Push-to-Everything unlocks smarter, faster, and more connected communication across your entire operation

As communication needs evolve beyond voice alone, Push-to-Everything (PTX) technology takes instant connectivity to the next level. PTX combines voice, video, messaging, location sharing, and real-time collaboration on a single platform – **keeping teams more informed, agile, and responsive.**

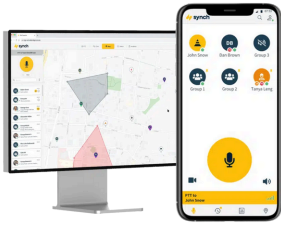

In today's complex, mobile industries, smarter communication is critical. PTX builds on the speed of Push-to-Talk while delivering richer information and broader capabilities, keeping your workforce connected and ready for whatever comes next.

Trilogy NextGen is a leader in delivering next-generation communication solutions built for the future of work. We design, deploy, and manage customized Push-to-Everything (PTX) networks that provide:

- **Seamless Connectivity** by unifying voice, video, and data into a powerful, real-time platform.
- **Enhanced Safety** with instant communication for faster emergency response and greater awareness.
- **Maximum Productivity** by keeping teams connected and mission-ready anywhere.

Next Generation PTX Solution Components

1 PTX Administration Platform

2 Ruggedized Hardware or BYOD Policy

3 Traditional PTT Gateway and Radios

Benefits of Next Generation Push-To-Everything (PTX)

Push-to-Talk, Push-to-Video, and Chat

Instantly communicate with individuals or groups through voice, live video, or chat. Share critical information in real time across your organization.

Live Location Tracking

Monitor worker locations at a glance and initiate PTT calls directly from the map for faster coordination and response.

Safe Worker Monitoring and SOS Alerts

Protect your workforce with live status updates, scheduled check-ins, no-movement detection, and SOS alarms – all managed through an integrated command and control center.

Geofencing and Location-Based Alerts

Define zones and Points of Interest (POI) on your map. Automatically alert users and supervisors when entering or exiting geofenced areas.

Real-Time Incident Management

Create, assign, and track incidents instantly. Dynamically allocate resources based on user proximity and monitor real-time status updates from the field.

Team Collaboration Tools

Access an organizational directory, search for team members, and collaborate with text, multimedia, recorded voice messages, and more.

Legacy Radio Integration and Support

Seamlessly bridge modern PTX platforms with existing PTT radio systems. Extend the life of your current devices while upgrading to next-generation capabilities.
